SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Computer Science and Engineering

ASSESSMENT TOOL 1 – CONCEPT MAP

Course Code:	ITA03	**Course Title:**	Mobile computing
CO Assessed:	CO1	**Assessment:**	Assessment Tool 1 – Concept Map
Weightage:	60 % of CIA	**Total Marks:**	20 marks
CO1 Statement:	*Analyse the mobile network components, mobile base station, mobile infrastructures and protocols in cellular systems.*		
Student Name:	P.Sunayana	**Reg. No.:**	192424303
Section / Batch:	AI&DS 2024	**Date:**	12-10-2026

Code of Conduct

I __P.Sunayana(192424303)__ (Name / Reg. No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: __P.Sunayana__

Instructions

- This test contains ONE question.
- Duration: 30 minutes (At home)

Annexure A - QUESTIONS

1. Design a concept map that evaluates the significance of the fundamental concepts of mobile computing.
   Establish relationships among mobility, portability, wireless communication, and ubiquitous computing.
   Prioritize the concepts based on their contribution to mobile computing.
   Justify the linking phrases used between the concepts.

2. Construct a concept map that evaluates the effectiveness of the cellular network architecture.
   Illustrate the interactions among Mobile Station, Base Station Subsystem, and Network Switching Subsystem.
   Identify the most critical components influencing communication.
   Justify your evaluation through meaningful concept relationships.

3. Develop a concept map that evaluates the impact of frequency reuse on cellular network performance.

Relate frequency planning, co-channel interference, adjacent channel interference, and network capacity.
Assess the effectiveness of interference reduction techniques.
Support your evaluation using appropriate linking phrases.

4. Design a concept map that evaluates the importance of different cellular access channels.
   Illustrate how paging, broadcast, control, and traffic channels contribute to communication.
   Rank the channels based on their operational significance.
   Justify the relationships established in the concept map.

5. Construct a concept map that evaluates the contribution of Mobile Station, Base Station Subsystem, and Network Switching Subsystem toward seamless communication.
   Illustrate their interdependencies.
   Assess which subsystem has the greatest influence on service continuity.
   Justify your conclusions using concept relationships.

6. Develop a concept map that evaluates the effectiveness of the mobile network protocol stack.
   Illustrate interactions among protocol layers.
   Assess how each layer contributes to reliable mobile communication.
   Support your evaluation with meaningful hierarchical relationships.

7. Design a concept map that evaluates the role of the core network in delivering mobile communication services.
   Relate authentication, mobility management, subscriber databases, and call routing.
   Determine the most influential core network functions.
   Justify your evaluation through concept linkages.

8. Construct a concept map that evaluates the operational efficiency of a Public Land Mobile Network (PLMN).
   Relate operators, subscribers, switching centers, and radio access networks.
   Assess how these components collectively provide seamless connectivity.
   Justify the relationships included in the concept map.

9. Develop a concept map that evaluates different mobility management functions.
   Illustrate relationships among location update, registration, paging, and tracking.
   Determine which functions most effectively maintain user connectivity.
   Support your evaluation with appropriate concept links.

10. Design a concept map that evaluates various handoff mechanisms used in cellular networks.
    Compare hard handoff, soft handoff, and handoff decision parameters.
    Assess their suitability for maintaining uninterrupted communication.
    Justify your evaluation using interconnected concepts.

11. Construct a concept map that evaluates the effectiveness of roaming mechanisms in mobile communication.
    Illustrate relationships among home network, visited network, authentication, registration, and billing.
    Assess the importance of each process in successful roaming.
    Support your conclusions through logical concept organization.

12. Develop a concept map that evaluates the relationship between mobility, handoff, and roaming.
    Illustrate their dependencies and interactions.
    Determine which mechanism contributes most to uninterrupted communication.
    Justify your evaluation using appropriate linking phrases.

13. Design a concept map that evaluates the influence of cellular performance criteria.
    Relate coverage, capacity, Quality of Service (QoS), reliability, throughput, and delay.
    Assess which criteria most significantly affect user experience.
    Justify the hierarchy established in the concept map.

14. Construct a concept map that evaluates the effectiveness of various cellular system operations.
    Include call setup, authentication, paging, resource allocation, handoff, and call termination.
    Assess the contribution of each operation to overall network performance.
    Support your evaluation through logical concept relationships.

15. Develop a concept map that evaluates the complete mobile communication process.
    Illustrate the interaction among user equipment, access network, core network, mobility management, and service delivery.
    Determine the most critical stages in ensuring communication quality.
    Justify your evaluation with meaningful linking phrases.

16. Design a concept map that evaluates the relationship between frequency reuse, interference, and network capacity.
    Assess how each factor influences cellular system efficiency.
    Prioritize the concepts based on their impact.
    Justify the relationships shown in the concept map.

17. Construct a concept map that evaluates the interdependence among cellular network architecture, protocol stack, and mobility management.
    Assess how these components collectively improve communication reliability.
    Identify the strongest conceptual relationships.
    Justify your evaluation using appropriate linkages.

18. Develop a concept map that evaluates resource management strategies in cellular networks.
    Relate channel allocation, power control, interference management, frequency reuse, and handoff management.
    Assess which strategy contributes most to efficient network utilization.
    Support your evaluation through concept relationships.

19. Design a concept map that evaluates the integration of all major concepts in mobile computing.
    Include architecture, protocol stack, mobility management, roaming, handoff, performance criteria, and cellular operations.
    Assess how these concepts collectively support an efficient mobile communication system.
    Justify the hierarchy and linking phrases used.

20. Construct a concept map that evaluates alternative approaches for improving cellular network performance.
    Relate mobility management, handoff optimization, interference reduction, protocol efficiency, and resource allocation.
    Recommend the most effective combination of techniques.
    Justify your recommendation through well-defined conceptual relationships.

Rubrics for Calculation

Criteria	Weightage	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Problem Context	20	Clearly understands the problem and accurately identifies all requirements	Good understanding with minor gaps	Basic understanding; some requirements unclear	Poor understanding or misinterpretation of the problem
Application of Concepts	30	Accurately applies appropriate concepts to solve complex problems	Applies relevant concepts correctly with minor errors	Applies basic concepts with limited accuracy	Fails to apply appropriate concepts
Problem-Solving Approach	20	Logical, well-structured, and efficient approach	Mostly logical approach with minor gaps	Basic approach with some inconsistencies	Illogical or unclear approach
Accuracy of Solution	20	Completely correct solution with proper justification	Mostly correct with minor errors	Partially correct solution	Incorrect or incomplete solution
Clarity	10	Clear, well-organized, and properly explained solution	Understandable with minor clarity issues	Limited clarity and explanation	Poorly presented and difficult to understand

Mobility, Handoff and Roaming

• Mobility
→ Ability of user device to move across different location / networks.
→ Triggers handoff & roaming

Movement within same network triggers.

Movement across different operators / regions triggers.

• Handoff
→ Transfer of an active connection from one base station to another.
→ Types :- Hard & soft handoff

Work together for seamless connectivity.

Handoff may occur during roaming.

• Roaming
→ Access to a foreign network (different operator / region)
→ Allows communication outside the home network.

• Dependencies
→ Mobility - is the root cause of all.
→ Handoff depends on mobility & network
→ Roaming depends on successful handoff

• Interactions
→ Mobility - triggers handoff (or) roaming.
→ Handoff - maintain the connections.
→ Roaming - extends the connections.

Handoff contributes the most, because it directly maintain the active connection b/w cells.
